Corvette EGR Tube Heat Shield Instructions

KIT CONTENTS:

010387 85-88

010388 90-91

010389 87-91

TOOLS:

Safety glasses

Gloves (Shield contains glass fibers)

Thank you for your purchase of Design Engineering's replacement EGR tube heat shield for the 1985 – 1991 Corvette. We have designed an easy to install replacement for your factory heat shield that does not require the removal of the EGR tube. Some applications may have an EGR temperature switch installed in the EGR tube. Our design allows you to install the new heat shield around the switch without having to remove the temperature switch.

INSTRUCTIONS:

1. Disconnect the positive battery cable.
2. Your EGR tube is located on the passenger side rear of the engine. Locate and remove any remaining factory heat shield.
3. Your new Design Engineering heat shield is designed with a hook and loop fastening system. Open the heat shield and place over the top of the EGR tube.
4. Wrap the heat shield around the tube and close with the hook and loop.
5. Slide the shield down the tube closing as you go until it is fully installed.
6. Connect your positive battery cable to finish the installation.
